

There is enough information below that should convince anyone willing to look beyond industry pressure and public ignorance to understand that the human experiment of exposing school children, over the long term, to high frequency pulsed radio frequency radiation from powerful industrial strength wi-fi routers, is going to affect possibly millions of children in the U.S. Exposure is cumulative and over time biological systems break down leaving the body susceptible to cancer, neurological disease, reproductive harm, blood brain barrier damage, genotoxicity, cognitive and psychological problems, addictive behavior and other biological and psychological problems. Please peruse the material and read as much as you can. The lives of children in schools should not be conditional on whether personal opinion overrides scientific fact.

The duty of politicians is to protect the health and safety of citizens and to become as informed on issues of safety especially when many thousands of studies confirm harm.

David Morrison / Portland OR.
