

Oregon SB 283

Please, please, please do what you can to make sure students, parents, employees and anyone else in the schools know of the potential radiation risks from the wireless network technology ahead of time. They deserve notification at least because many people are affected negatively. There is very much evidence proving the damage to our dna and our bodies as a whole over time. For children, that time could be in fifty years when they enter old age, their damage could be extreme.
