

Dear Representative:

There is only one federal program that has its own courts, its own documented history of program injury, and \$4 billion of taxpayer funds in its own account with which to pay out claims on injury. That is the national vaccine program. Since 1986, it has paid out \$3.7 billion dollars in claims; 50% of those claims have happened in the last six years.

The state would never require me to buy a Toyota because it's accelerator pedals get stuck, Or buy a Pinto since maybe it's gas tank will explode. Vaccines rarely cause harm, but they absolutely can do it and they will do it randomly.

Do not put my daughter in harm's way! Protect her by continuing to allow us, her parents, the informed option to not vaccinate.

Please vote to kill this bill.

David Sawyer, Salem, OR
