

Does your child have symptoms of Wi-Fi exposure at school?

Classrooms equipped with industrial strength routers and 30+ wireless devices emit radiofrequency (microwave) radiation and put children at risk for Electromagnetic Hypersensitivity (EHS).

Children deserve a safe & healthy school environment -
FREE of wireless radiation

NACST.org

What You Need to Know

- Symptoms of exposure may improve or clear after the Wi-Fi is turned off or the child is removed from the environment.
- Strength, duration of exposure, child's age, pre-existing conditions and other toxic exposures may also be contributing factors.
- While few medical professionals in the U.S. are trained to recognize and treat the signs of wireless radiation exposure, more are becoming knowledgeable.
- Please do your research to find a doctor who can help diagnose and treat any symptoms related to exposure. The American Academy of Environmental Medicine offers a physician referral data base for your convenience: <<http://www.aaemonline.org/referral.php>>.
- EHS is a recognized disability under the Americans with Disabilities Act (ADA). Schools that have wireless networks in use become inaccessible to children and adults who suffer from this condition.
- Governors of Florida, Colorado and Connecticut have issued proclamations recognizing May as EHS Awareness Month.
- For more information and resources on this topic, please visit <<http://www.nacst.org/electromagnetic-hypersensitivity.html>>.

The National Association for Children and Safe Technology (NACST) is an organization dedicated to raising awareness about the health impacts of wireless radiation on children as well as advancing policies that safeguard children's health and well-being.
