

I am a very concerned and outraged citizen of stronger and increased EMF radiation being irresponsibly forced within our communities on all life! Children, elderly and those with biological complications do not need further increased radiation imposed on us.

I support this bill fully as a starting point of being more conscious in being more preventative in protecting our developing children.

And now with this 5-G roll out being aggressively installed every 250'-500' within our dense populations it is extremely dangerous and is simply not worth taking the risks.

Fiber Optics and hard wired technology is the direction we need to go in keeping up with future demands. We need to consider all costs involved, especially our health, and cyber threats. We need to do all we can to stop this multi-Trillion Telecom Industry from further invasion and take over our public space with no due process, transparency, responsibility, or consideration of the true costs to the greater whole.

Prevention over Crisis is the safe direction to go.
