

Hello and thank you for your time,

I am writing to ask that you please vote to pass SB 283 to disclose information about potential wireless risks in schools. I believe this is of the utmost importance to our children.

I have 2 children in public elementary school here in Eugene, and I am very aware of the high wireless exposure in our schools. My health is personally affected by wireless radiation. It has taken me a lot of time, patience, and the good fortune of meeting doctors who have helped me figure out the relationship between wireless radiation and my own health concerns. I get particular symptoms when I am exposed to this radiation. After remediating my home environment, I can now clearly feel the effects of wireless technology on my mind and body when I spend time volunteering in the public school classrooms. Although perhaps I am more sensitive to noticing these effects than the average person, I believe this is a vitally important concern for all people; teachers and staff included, and especially for children. Children have even greater impacts from wireless with their growing brains, and there is a growing need to help them understand the importance of using this technology wisely.

Please vote to pass SB 283!

Sincerely,
Lisa McWhorter
