

Dear Committee,

I am writing to encourage you to support SB 283, a long overdue step to protecting our children from the dangers of WiFi and other RF (non- ionizing microwave radiation) emitting devices at school. As you must be well aware many other countries including France have already banned WiFi from class rooms for concerns of Cancer, diabetes, neurological disorders, infertility, and more.

Here are some website that site the science and advocate change :

<https://www.5gspaceappeal.org/the-appeal>

This situation stands to worsen with routers, phones, and other tech with the coming generation of wireless, 5G, which will work with frequencies billions of times higher, ranging from 2.4 GHz (what we have now) which is already billions of times faster than Earth's frequencies and already interferes with cellular function and breaks DNA strands(as shown by over a thousand peer reviewed studies to frequencies from 24 GHz to 300GHz of 5 G .

The 5G is being deployed right now in Eugene, where I live and this is very frightening. I hope that you our representatives can stop it's roll out in Oregon as it is so highly dangerous. It is being put up around schools and homes right now with out ever haven been proven safe and to the contrary hundreds of scientists internationally warn that it is highly dangerous to all of life on Earth.

Thank you for helping to protect us,

Sabrina Siegel
