

I support the -2 amendment to HB 3063. If you are going to segregate children for missing one or more vaccines from their right to a public education then the state should allow parents to apply the money to expenses they will incur to otherwise provide that child an education. Oregonians pay for public school with their taxes. If an Oregonian is not allowed to access that public education they should be allowed to apply that money to an alternative education option.

I also strongly support a religious exemption to any mandates.
