

My grandmother died from the flu vaccination a week after she received it, and my oldest child had a seizure from the Dtap. While I believe vaccines work, I also am concerned with the safety regulations and exemptions! The medical exemptions need to be expanded before any mandate is put in place. Please. If this passes I will have to inject my son with more of the the Dtap..which caused his seizure :( This is terrifying to me as a mother.

He can't get a medical exemption because it covers such a small amount of people and isn't up to date with current science.... he also does deserve an education. It isn't his fault he had a seizure.

We did have a blood test done showing a Cytochrome P450 gene mutation which deals directly with drug metabolism. He is a rapid metabolizer and this may have been the cause but genetic history doesn't count as an exemption.

I am a college graduate, masters program student and mother. I plan to go into an accelerated nursing school program to become a PMHNP as well at Vanderbilt university. I am deeply concerned about the impact this will have on children like mine. If you have any questions please do not hesitate to call me.
