

As representatives of the people, listen to what so many people are telling you. I urge you to vote no on HB 3063. Medical decisions belong between the doctor and patient. Mandatory vaccination is NOT the answer. Protect medical freedom.

Can you say that vaccines are undoubtedly safe for all and force everyone to get them all when you HAVE NO PROOF that they will not cause harm? There are many studies showing that they do have the potential to harm. The rate of childhood cancer, autoimmune diseases, neurodevelopmental disorders, including autism spectrum diseases, have skyrocketed with the large increase in CDC recommended vaccines since the early 1990's. Our desire to protect them from one thing has opened a door to a host of other damaging long term effects.

One of the top pediatric neurologists and a government expert witness in the US, Dr Andrew Zimmern recently released an affidavit saying that he believes there is a connection between vaccination triggering the onset of autism. VAERS has compensated families of children whose autism was directly linked to a vaccine.

Does this not alarm you?

People often refer to the Dr Andrew Wakefield study from the Lancet saying things like: *Those "anti-vaxxers" believe that the MMR is tied to autism but that study was falsified and the myth has been debunked. The science is settled. There is no relationship between vaccines and autism. Etc, etc.* Have you ever read the Lancet piece? Do you even know what it says? The study's concluding paragraph is below. I have attached a copy of the full study as well.

We have identified a chronic enterocolitis in children that may be related to neuropsychiatric dysfunction. In most cases, onset of symptoms was after measles, mumps, and rubella immunisation. Further investigations are needed to examine this syndrome and its possible relation to this vaccine.

There was no falsification. There was no "debunking" of any vaccine myths. We are not making crazy things up in our heads. Dr Wakefield just refused to hide their data and was crucified, so to speak. He explains his story. I can guarantee that the vast majority of those supporting vaccine freedom or who choose to no longer vaccinate have more research on the topic of vaccines, their safety, and basic immunology than most of the people who throw derogatory slurs, such as "anti-vaxxers" and condemn anyone who chooses to not vaccinate. Thousands of parents say the same story about their child regressing after vaccines. How can you argue with the parent who has raised their child and watched them change so drastically and immediately, or worse, pass away? The stories are all remarkably similar if you would listen.

Do not take away the right of a parent to choose for their child. You cannot promise us that all children will be unaffected adversely. That is false. Do not mandate something with a known significant risk factor. Please listen to what we parents are saying. Our childrens futures are at stake.

Thank you for your time,
