

I want a third bridge across the river in salem. I think we've needed one for quite some time. specifically I think we need a two way bridge in salem. It has to go somewhere that people want to go though and it has to be done economically. See I trust the government both state and city to make the best decisions for all of us because this has been an idea talked about for far too long. It's time to put boots on the ground because the longer we wait to do this thing the more money it's going to cost us. Now maybe in retrospect we should have tried to do this in 2008 or 2009 cause then maybe we could have helped some people get out of the Houseing market crash. It seems that there's always no shortage of Great ideas out there, the trouble is no one seems to want to pay for them. Sometimes it pays to invest in the future. For example I remember it took three or four tries to finally get the final silvertown high school bond muser passed because no one seemed to want to pay for it. My dad lives in the West Salem hills and he was telling me that for some reason if there's a third bridge built that his favorite exit would have to be taken away, witch doesn't make any sense to me. So I think we build this third bridge with out touching anything on the old bridges because that doesn't make any sense to me at all, why touch something that's already working just fine. Some people might think that this is government oversight but I still have trust in my government. Thank you for taking the time to carefully read my thoughts on this bill.
