#### BACKGROUND:

According to the United States Geological Survey (USGS), stream gauges measure the height of water surface in a stream or river, obtain periodic measurements of water discharge, and define the difference between the rivers height and discharge. USGS currently collects data from 13 stream gauges in the Klamath County. The Oregon Water Resources Department manages and collects data from stream gauges around the state.

House Bill 3081 would appropriate money from the General Fund to the Oregon Department of Administrative Services to be distributed to Klamath County to acquire and install stream gauges in the Klamath Basin.
