Subject: Neonics and chlorpyrifos
Date: Tuesday, March 26, 2019 11:44:40 AM

Placing neonics in the RUP category is a good idea, especially since I believe the problems have been caused by applicators lacking proper training.

However, banning PPI applications of chlorpyrifos is very short sighted. Oregon growers currently have no effective, labeled alternatives for all their crops. Without chlorpyrifos they will have no other options for control of some soil insects for their high value vegetable seed crops.

Sincerely,

Ted Hake
