Spraying pesticides in our forests HB 926

Please stop HB 926. The continue industrial-scale assault on our natural resources must stop. The children of today will have to face the consequence of poisoned biomes, watersheds, understory, and habitat destruction. Please take a stand to stop the madness. We need to be free of worry about our health, terrain, and wildlife all around us. We want to be able to wade or fish in streams without worrying about the quality of the water. Stop this egregious experiment and risk to future generations just for a fist full of dollars for the timber industry.
