

My Name is Billy Seroyer and I live in Milwaukie Oregon and I oppose SB 978, in particular I oppose section 14 of the dash 1 amendment of the bill, UNDETECTABLE AND UNTRACEABLE FIREARMS. First and foremost I'd like to point out that the Undetectable Firearms Act of 1988 has already rendered undetectable firearms illegal on a federal level so this amendment is already redundant. I'd also like to point out that according to the AFT a unfinished frame or receiver is nothing more than a block of Aluminum or steel, and as treated as such. Is the state of Oregon going to start requiring home depot to get an FFL and start conducting background checks and taking thumbprints of customers that wish to buy blocks of Aluminum or Steel from them? As pertaining to 3d printed firearms I ask the legislature how they plan on getting OSP to enforce this law? Will they be serializing all 3D printers and USB drives coming into Oregon and keeping track of when they are used? Or will the state be using a Chinese style Intranet to block Oregonians from the outside world? Throughout the 2000s Hollywood and music industry tried to take down internet Piracy sites and failed spectacularly. You can't stop something once its already on the internet because the internet completely decentralized, mega.com, The Pirate Bay, still exist and so do the CAD files for 3D printed firearms.

Thank you

Billy Seroyer
