Dear Submit Testimony,

As your constituent, I am seeking your support of HB3058 and SB853 to protect Oregon's children and environment from dangerous pesticides. Chlorpyrifos and neonicotinoids have serious effects on human and environmental health. Like Hawaii, which has already banned chlorpyrifos, and Maryland, which ended consumer sales of neonics, Oregon has the opportunity protect its wildlife and children from these brain-damaging, pollinator-killing pesticides.

Chlorpyrifos is dangerous for anyone near an application—even those a football field away are at risk—but the EPA label does not mandate protective buffer zones for farmworker homes, schools, and other farms. We and our children are also exposed to dangerous levels of this neurotoxin in residues on food. The science is clear that pesticides like chlorpyrifos cause brain damage to children. To cap it off, chlorpyrifos also gets into Oregon streams, threatening our already imperiled salmon and steelhead.

For this reason, the EPA was going to stop the use of chlorpyrifos, but then the Trump administration reversed that decision, putting Dow Chemical ahead of the nation's children. That is why I am asking you to step up and protect our kids by supporting these bills.

HB3058 and SB853 would also make the neonicotinoid class of insecticides “restricted use,” meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. Neonics are highly toxic to bees, beneficial insects, and aquatic invertebrates (an important part of the food web). Because they move in water, they are prone to drift from yards and fields into water. Likewise, since they are systemic they persist in plants and increase toxic exposure to insects. Seeds coated in neonics are also dangerous to birds – just a single seed can kill a songbird.

Please support HB3058 and SB853, to protect Oregon's children and environment from these dangerous pesticides.

Sincerely,  
Diane Chavez  
315 Commercial St SE Apt 519 Salem, OR 97301-3497

Chlorpyrifos and neonicotinoids have serious effects on human and environmental health. Like Hawaii, which has already banned chlorpyrifos, and Maryland, which ended consumer sales of neonics, Oregon has the opportunity protect its wildlife and children from these brain-damaging, pollinator-killing pesticides.

Chlorpyrifos is dangerous for anyone near an application—even those a football field away are at risk—but the EPA label does not mandate protective buffer zones for farmworker homes, schools, and other farms. We and our children are also exposed to dangerous levels of this neurotoxin in residues on food. The science is clear that pesticides like chlorpyrifos cause brain damage to children. To cap it off, chlorpyrifos also gets into Oregon streams, threatening our already imperiled salmon and steelhead.

For this reason, the EPA was going to stop the use of chlorpyrifos, but then the Trump administration reversed that decision, putting Dow Chemical ahead of the nation's children. That is why I am asking you to step up and protect our kids by supporting these bills.

HB3058 and SB853 would also make the neonicotinoid class of insecticides “restricted use,” meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. Neonics are highly toxic to bees, beneficial insects, and aquatic invertebrates (an important part of the food web). Because they move in water, they are prone to drift from yards and fields into water. Likewise, since they are systemic they persist in plants and increase toxic exposure to insects. Seeds coated in neonics are also dangerous to birds – just a single seed can kill a songbird.

Please support HB3058 and SB853, to protect Oregon's children and environment from these dangerous pesticides.

Sincerely,  
Rita Orlandini  
1366 Queens Branch Rd Rogue River, OR 97537-6639

Dear Sr. Committee Assistant Shelley Raszka,

I've been a member of the Xerces Society for years, so restricting pesticide use is not a new concern for me. The rest of this is boilerplate, but it's boilerplate with which I agree.

As your constituent, I am seeking your support of HB3058 and SB853 to protect Oregon's children and environment from dangerous pesticides. Chlorpyrifos and neonicotinoids have serious effects on human and environmental health. Like Hawaii, which has already banned chlorpyrifos, and Maryland, which ended consumer sales of neonics, Oregon has the opportunity protect its wildlife and children from these brain-damaging, pollinator-killing pesticides.

Chlorpyrifos is dangerous for anyone near an application—even those a football field away are at risk—but the EPA label does not mandate protective buffer zones for farmworker homes, schools, and other farms. We and our children are also exposed to dangerous levels of this neurotoxin in residues on food. The science is clear that pesticides like chlorpyrifos cause brain damage to children. Chlorpyrifos is dangerous for anyone near an application—even those a football field away are at risk—but the EPA label does not mandate protective buffer zones for farmworker homes, schools, and other farms. We and our children are also exposed to dangerous levels of this neurotoxin in residues on food. The science is clear that pesticides like chlorpyrifos cause brain damage to children. To cap it off, chlorpyrifos also gets into Oregon streams, threatening our already imperiled salmon and steelhead.

For this reason, the EPA was going to stop the use of chlorpyrifos, but then the Trump administration reversed that decision, putting Dow Chemical ahead of the nation's children. That is why I am asking you to step up and protect our kids by supporting these bills.

HB3058 and SB853 would also make the neonicotinoid class of insecticides “restricted use,” meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. Neonics are highly toxic to bees, beneficial insects, and aquatic invertebrates (an important part of the food web). Because they move in water, they are prone to drift from yards and fields into water. Likewise, since they are systemic they persist in plants and increase toxic exposure to insects. Seeds coated in neonics are also dangerous to birds – just a single seed can kill a songbird.

Please support HB3058 and SB853, to protect Oregon's children and environment from these dangerous pesticides.

Sincerely,  
Sarah Daggett  
20103 47Th Avenue Ct E Spanaway, WA 98387-6028

Dear Sr. Committee Assistant Shelley Raszka,

As your constituent, I am seeking your support of HB3058 and SB853 to protect Oregon's children and environment from dangerous pesticides. Chlorpyrifos and neonicotinoids have serious effects on human and environmental health. Like Hawaii, which has already banned chlorpyrifos, and Maryland, which ended consumer sales of neonics, Oregon has the opportunity protect its wildlife and children from these brain-damaging, pollinator-killing pesticides.

Chlorpyrifos is dangerous for anyone near an application—even those a football field away are at risk—but the EPA label does not mandate protective buffer zones for farmworker homes, schools, and other farms. We and our children are also exposed to dangerous levels of this neurotoxin in residues on food. The science is clear that pesticides like chlorpyrifos cause brain damage to children. To cap it off, chlorpyrifos also gets into Oregon streams, threatening our already imperiled salmon and steelhead.

For this reason, the EPA was going to stop the use of chlorpyrifos, but then the Trump administration reversed that decision, putting Dow Chemical ahead of the nation's children. That is why I am asking you to step up and protect our kids by supporting these bills.

HB3058 and SB853 would also make the neonicotinoid class of insecticides "restricted use," meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. To cap it off, chlorpyrifos also gets into Oregon streams, threatening our already imperiled salmon and steelhead.

For this reason, the EPA was going to stop the use of chlorpyrifos, but then the Trump administration reversed that decision, putting Dow Chemical ahead of the nation's children. That is why I am asking you to step up and protect our kids by supporting these bills.

HB3058 and SB853 would also make the neonicotinoid class of insecticides "restricted use," meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. Neonics are highly toxic to bees, beneficial insects, and aquatic invertebrates (an important part of the food web). Because they move in water, they are prone to drift from yards and fields into water. Likewise, since they are systemic they persist in plants and increase toxic exposure to insects. Seeds coated in neonics are also dangerous to birds – just a single seed can kill a songbird.

Please support HB3058 and SB853, to protect Oregon's children and environment from these dangerous pesticides.

Sincerely,  
CHARLES SMITH  
528 E Calhoun St Woodstock, IL 60098-4291

Dear Sr. Committee Assistant Shelley Raszka,

As your constituent, I am seeking your support of HB3058 and SB853 to protect Oregon's children and environment from dangerous pesticides. Chlorpyrifos and neonicotinoids have serious effects on human and environmental health. Like Hawaii, which has already banned chlorpyrifos, and Maryland, which ended consumer sales of neonics, Oregon has the opportunity protect its wildlife and children from these brain-damaging, pollinator-killing pesticides.

Chlorpyrifos is dangerous for anyone near an application—even those a football field away are at risk—but the EPA label does not mandate protective buffer zones for farmworker homes, schools, and other farms. We and our children are also exposed to dangerous levels of this neurotoxin in residues on food. The science is clear that pesticides like chlorpyrifos cause brain damage to children. To cap it off, chlorpyrifos also gets into Oregon streams, threatening our already imperiled salmon and steelhead.

For this reason, the EPA was going to stop the use of chlorpyrifos, but then the Trump administration reversed that decision, putting Dow Chemical ahead of the nation's children. That is why I am asking you to step up and protect our kids by supporting these bills.

HB3058 and SB853 would also make the neonicotinoid class of insecticides "restricted use," meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. HB3058 and SB853 would also make the neonicotinoid class of insecticides “restricted use,” meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. Neonics are highly toxic to bees, beneficial insects, and aquatic invertebrates (an important part of the food web). Because they move in water, they are prone to drift from yards and fields into water. Likewise, since they are systemic they persist in plants and increase toxic exposure to insects. Seeds coated in neonics are also dangerous to birds – just a single seed can kill a songbird.

Please support HB3058 and SB853, to protect Oregon's children and environment from these dangerous pesticides.

Sincerely,  
Linda Serio

Dear Sr. Committee Assistant Shelley Raszka,

As your constituent, I am seeking your support of HB3058 and SB853 to protect Oregon's children and environment from dangerous pesticides. Chlorpyrifos and neonicotinoids have serious effects on human and environmental health. Like Hawaii, which has already banned chlorpyrifos, and Maryland, which ended consumer sales of neonics, Oregon has the opportunity protect its wildlife and children from these brain-damaging, pollinator-killing pesticides.

Chlorpyrifos is dangerous for anyone near an application—even those a football field away are at risk—but the EPA label does not mandate protective buffer zones for farmworker homes, schools, and other farms. We and our children are also exposed to dangerous levels of this neurotoxin in residues on food. The science is clear that pesticides like chlorpyrifos cause brain damage to children. To cap it off, chlorpyrifos also gets into Oregon streams, threatening our already imperiled salmon and steelhead.

For this reason, the EPA was going to stop the use of chlorpyrifos, but then the Trump administration reversed that decision, putting Dow Chemical ahead of the nation's children. That is why I am asking you to step up and protect our kids by supporting these bills.

HB3058 and SB853 would also make the neonicotinoid class of insecticides “restricted use,” meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. Neonics are highly toxic to bees, beneficial insects, and aquatic invertebrates (an important part of the food web). Because they move in water, they are prone to drift from yards and fields into water. Likewise, since they are systemic they persist in plants and increase toxic exposure to insects. Seeds coated in neonics are also dangerous to birds – just a single seed can kill a songbird.

Please support HB3058 and SB853, to protect Oregon's children and environment from these dangerous pesticides.

Sincerely,

Dear Submit Testimony,

As your constituent, I am seeking your support of HB3058 and SB853 to protect Oregon's children and environment from dangerous pesticides. Chlorpyrifos and neonicotinoids have serious effects on human and environmental health. Like Hawaii, which has already banned chlorpyrifos, and Maryland, which ended consumer sales of neonics, Oregon has the opportunity protect its wildlife and children from these brain-damaging, pollinator-killing pesticides.

Chlorpyrifos is dangerous for anyone near an application—even those a football field away are at risk—but the EPA label does not mandate protective buffer zones for farmworker homes, schools, and other farms. We and our children are also exposed to dangerous levels of this neurotoxin in residues on food. The science is clear that pesticides like chlorpyrifos cause brain damage to children. To cap it off, chlorpyrifos also gets into Oregon streams, threatening our already imperiled salmon and steelhead.

For this reason, the EPA was going to stop the use of chlorpyrifos, but then the Trump administration reversed that decision, putting Dow Chemical ahead of the nation's children. That is why I am asking you to step up and protect our kids by supporting these bills.

HB3058 and SB853 would also make the neonicotinoid class of insecticides "restricted use," meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. Neonics are highly toxic to bees, beneficial insects, and aquatic invertebrates (an important part of the food web). Because they move in water, they are prone to drift from yards and fields into water. Likewise, since they are systemic they persist in plants and increase toxic exposure to insects. Seeds coated in neonics are also dangerous to birds – just a single seed can kill a songbird.

Please support HB3058 and SB853, to protect Oregon's children and environment from these dangerous pesticides.

Sincerely,  
Cynthia Miller  
799 Oldenburg Way Galt, CA 95632-8146

Chlorpyrifos and neonicotinoids have serious effects on human and environmental health. Like Hawaii, which has already banned chlorpyrifos, and Maryland, which ended consumer sales of neonics, Oregon has the opportunity protect its wildlife and children from these brain-damaging, pollinator-killing pesticides.

Chlorpyrifos is dangerous for anyone near an application—even those a football field away are at risk—but the EPA label does not mandate protective buffer zones for farmworker homes, schools, and other farms. We and our children are also exposed to dangerous levels of this neurotoxin in residues on food. The science is clear that pesticides like chlorpyrifos cause brain damage to children. To cap it off, chlorpyrifos also gets into Oregon streams, threatening our already imperiled salmon and steelhead.

For this reason, the EPA was going to stop the use of chlorpyrifos, but then the Trump administration reversed that decision, putting Dow Chemical ahead of the nation's children. That is why I am asking you to step up and protect our kids by supporting these bills.

HB3058 and SB853 would also make the neonicotinoid class of insecticides "restricted use," meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. Neonics are highly toxic to bees, beneficial insects, and aquatic invertebrates (an important part of the food web). Because they move in water, they are prone to drift from yards and fields into water. Likewise, since they are systemic they persist in plants and increase toxic exposure to insects. Seeds coated in neonics are also dangerous to birds – just a single seed can kill a songbird.

Please support HB3058 and SB853, to protect Oregon's children and environment from these dangerous pesticides.

Sincerely,  
Megan Doughman

Dear Submit Testimony,

As your constituent, I am seeking your support of HB3058 and SB853 to protect Oregon's children and environment from dangerous pesticides. Chlorpyrifos and neonicotinoids have serious effects on human and environmental health. Like Hawaii, which has already banned chlorpyrifos, and Maryland, which ended consumer sales of neonics, Oregon has the opportunity protect its wildlife and children from these brain-damaging, pollinator-killing pesticides.

Chlorpyrifos is dangerous for anyone near an application—even those a football field away are at risk—but the EPA label does not mandate protective buffer zones for farmworker homes, schools, and other farms. We and our children are also exposed to dangerous levels of this neurotoxin in residues on food. The science is clear that pesticides like chlorpyrifos cause brain damage to children. To cap it off, chlorpyrifos also gets into Oregon streams, threatening our already imperiled salmon and steelhead.

For this reason, the EPA was going to stop the use of chlorpyrifos, but then the Trump administration reversed that decision, putting Dow Chemical ahead of the nation's children. That is why I am asking you to step up and protect our kids by supporting these bills.

HB3058 and SB853 would also make the neonicotinoid class of insecticides “restricted use,” meaning that people who don't have an Oregon license to apply pesticides wouldn't be able to buy and use these chemicals, which are widely sold in garden centers and big box stores with no education about their grim effects. Neonics are highly toxic to bees, beneficial insects, and aquatic invertebrates (an important part of the food web). Because they move in water, they are prone to drift from yards and fields into water. Likewise, since they are systemic they persist in plants and increase toxic exposure to insects. Seeds coated in neonics are also dangerous to birds – just a single seed can kill a songbird.

Please support HB3058 and SB853, to protect Oregon's children and environment from these dangerous pesticides.

Sincerely,
