SENATE BILL #926

How can aerial spray be  
contained AND NOT DRIFT IN

FOREST LANDS? THERE ARE TOO MANY  
UNCONTROLLABLE VARIABLES TO MAKE AERIAL SPRAY SAFE.  
AERIAL SPRAY <sup>with</sup> RUNOFF, DRIFT OVER

AND) CONTAMINATES ALL THE GROUND,

AND WATER, ANIMALS, AQUATIC AND

TERRESTRIAL, AND MAY BEGIN AND

MAINTAIN ECOSYSTEM DAMAGE THAT IS

HARD TO CALCULATE, KNOW ABOUT, BUT

~~SURFACES LATER ON.~~ REMAINS UNKNOWN  
AND POSSIBLY HAZARDOUS.  
MORE SCIENCE IS NEEDED. MORE CAUTION IS MANDATED,

HAND SPRAY IS MORE  
EXPENSIVE BUT MORE MANAGEABLE  
AND DOESN'T LET THE "GENIE OUT OF THE BOTTLE"  
PAUL FERRIS, Oceanside resident <sup>the unknown.</sup>

Please keep me informed on this matter.

In Support of HB 931

I support HB 931. My reasons  
are both scientific, common sense,  
AND LONG TERM. It's a "NO BRAINER."

THE FERNS IS A HALF-GOOD  
MEASURE. "FERNS" IS A NOTIFICATION<sub>^</sub>  
SYSTEM  
THAT GOES HALF-WAY. THERE IS NO  
REPLACEMENT FOR FULL AND COMPLETE  
COMMUNICATION BETWEEN THE GENERAL  
PUBLIC AND THE TIMBER INDUSTRIES.

\* THE "COCKTAIL" OF SPRAYS HERBICIDE,  
RODENTICIDE, FUNGICIDES, AND  
PESTICIDES MUST BE DISCLOSED, WITH THEIR  
SCHEDULES WITH THE LEAST DAMAGE DONE.  
Paul Clavin April 2nd, 2019
