

To the House Rules Committee: This resolution is important because it focuses on providing and maintaining wild salmon in North America. Having vibrant runs of salmon can significantly contribute to a healthy earth and clean water. Salmon fishing has always provided an essential connection to the ecosystem, and this part of the human experience must not be allowed to shrink or disappear. Accordingly, the Association of Northwest Steelheaders supports efforts and considerations well articulated in HCR 35 —science based things which will improve the knowledge and environment involving all salmon, wild and hatchery.
