Re: SUPPORT of SB 638, which requires research facilities to make available for adoption healthy dogs and cats no longer needed for research.

Dear Chairwoman Williamson and Members of the House Committee on Judiciary,

On behalf of the National Anti-Vivisection Society (NAVS), and our Oregon-based supporters, please accept this testimony **in support of SB 638**, a proposal to give healthy dogs and cats no longer needed for research a chance to be adopted into loving homes. This is a bill that provides for a compassionate alternative that just makes sense—an otherwise healthy animal once used in research should be made available for adoption instead of facing euthanasia.

Every year, over 100 million animals are used as subjects of scientific and medical research, safety testing and for educational purposes. In 2017, the most recent year for which this data is available, 792,168 animals covered by the Animal Welfare Act were used in research, teaching and testing or held for future research, according to data obtained from the U.S. Department of Agriculture. In 2017, 7,947 animals were reportedly used for these purposes by research facilities in Oregon. This number includes 27 cats and 26 dogs.

While this is a very small number of dogs and cats, the importance of adoption over euthanasia is of utmost importance to each of these animals—and that small number means that the effort to screen and adopt these animals would not unduly burden the research facilities nor any animal rescue group agreeing to offer these animals for adoption.

Currently, the USDA records on animal use provide only scant information on how these animals are used and their disposition after the research is over. This bill, fortunately, would fill in some of the gaps in information by requiring research facilities to provide an accounting of how many dogs and cats they are using and how many are offered to animal rescue groups for adoption each year.

Precedent for this kind of legislative remedy to euthanizing research animals is growing. In 2014, Minnesota passed the first law that requires publicly-funded institutions of higher learning to adopt out their dogs and cats used for research and education instead of routinely euthanizing them when they are no longer needed. Since the Minnesota bill was passed, eight other states—California, Connecticut, Delaware, Illinois, Maryland, Nevada, New York and Rhode Island—have adopted similar legislation. Eight more states have introduced similar bills in 2019, including Washington, which passed their bill in April.

A 2015 Gallup poll showed that 67% of Americans were “very” or “somewhat” concerned about animals used for research. The public largely agrees that animals no longer needed for research should be offered for adoption.

Dogs and cats deserve to have a chance to live in a home as a cherished companion after spending time in a research facility. This bill would ensure that all healthy dogs and cats at research facilities

throughout Oregon, now and in the future, will have a chance to be considered for adoption—not as an exception, but as part of the normal process in using these animals.

On behalf of our Oregon supporters, we hope that you vote “yes” in support of SB 638.

Thank you.
