

Dear Chairman Doherty and Members of the Education Committee:

As a citizen and parent I am very concerned about any survey which automatically opts a person in and requires them take an action to opt out. It should be the other way around especially where Government is asking a student to reveal personal and sensitive information regarding behavior health or any health information. This is an intrusion into the family and as I read the bill, is so open ended that OHA could overtime add more invasive questions inserting itself into the privacy of families.

This is ill-conceived and government needs to respect the family unit. HB4132 does not.

Respectfully,

Michael Framson
