2/5/20

Dear members of Senate Committee on Environment and Natural Resources:

My name is Carolyn Jean Guidry and I live in Lane County. Right now the costs of negative climate impacts are skyrocketing and need to be addressed as an emergency. We need to change the way the government operates...NOW. SBs 1530 and 1514 need to be stronger. Here is what is needed:

- Implement cap/trade and invest portions immediately.
- Make the natural gas industry pay the carbon tax.
- Prioritize long-term carbon sequestration on all lands (not just "working lands.")
- Make reducing greenhouse gas emissions a priority for every state agency.
- The Climate Fund should support home-hardening and defensible space near homes
- Require the Green House Gas Emissions Reduction Board and agencies to do economic cost/benefit/savings analyses for all rules and recommendations
- Under Section 102, prioritize the GHG Board and all agencies to educate the public on ways to reduce emissions
- New provisions on monitoring and accountability. All state agencies should be monitoring GHG targets and account for their actions.
- Require the Revenue Officer's economic report, Sec 93, to include the savings and benefits of reduced GHG emissions.
- Continue funding the Global Warming Commission for a year to complete work and then to transition duties to the GHG Emissions Reduction Board.

Thank you for your consideration  
Carolyn Jean Guidry
