As a rural Oregonian I would like to lend my support to SB 1530 and ask that the legislature pass a strong bill which will launch Oregon towards a meaningful reduction of greenhouse gases. Scientists give us only a 10 -12 year window to make drastic changes to our production of greenhouse gases to delay/ameliorate the impending tragedy. Passing SB 1530 with no amendments which would weaken it should be considered an emergency and I'm hoping the legislature will look beyond immediate short term "pain" in order to achieve long term "gain". If we allow this chance to slow/reverse course to go by, the long term pain will be immense.
