

To the members of the committee,

I come from a long line of farmers and am owner of a small tree farm in the foothills of the coast range. SB1530 threatens life as we know it in Oregon. The fact of the matter is Oregon is already a minuscule drop in the bucket in terms of CO2 emissions in the world already. What it comes down to is that this scheme is all about taxes and control of the people... money and power. It disproportionately affects rural Oregonians, and ultimately will affect everyone in the State who uses any products that are transported by truck, purchases fuel, electricity, etc.

Then to top it off this suddenly is important enough to be considered an emergency? The use of emergency clauses is at an all time high, particularly when it seems to suit the legislature to cram something down the citizens throats with little to no recourse for the citizens to repeal. You know precisely what you are doing and it needs to stop.

Stop SB 1530, its bad for Oregon.
