---

Dear Chair Salinas,

I see this as miss informed public information. It is to become a hysteria of a chemical that is needed on the farm. Its used to supply the food for our nation. It is already regulated by an agency that is qualified to make scientific decisions about a pesticide. Are we ready to get rid of our science based information and go to legislators and ask if a chemical is safe to use. This is what this bill is all about. Who do you trust as your pesticide annalist. The media, your environmentalist, the public on the street or ODA.

Sincerely,

Kevin Duyck
