

To the Senate Committee on Environment and Natural Resources:

Thank God for Climate Change without it life would be very boring. And thank God you are not God.

I would like to urge your no vote on the current bill. It is without a doubt the biggest hoax foisted upon the people of this planet. You are sadly mistaken if you should think you can change the climate by your actions. I witnessed one person testify before you to the effect he hoped to see all the greenhouse gases eliminated and used CO 2 as an example for irradiation. That would be impossible without destroying all life on this planet and let me invite you to set a good example by eliminating your life first.

Perhaps those who commit suicide via firearms as I heard many speak to before the Judiciary Committee about SB 4005 is the solution to the problems of too much human generated Carbon. I am being somewhat facetious; however, both of these bills are the products of people who want to destroy this country and its government.

Thank You,

Dale Casey, Medford, Oregon.
