

Hello,

Please consider tabling this bill during this session in favor of a more collaborative bill that considers the burden for all Oregonians. As a third generation Oregonian, I am very concerned that our way of life may be impacted if we don't address climate change. However, it should not come in the backs of farmers, the logging and trucking industries. And certainly not through additional taxes. I am a retired on a fixed income. We cannot continue to be taxed more and more in order to support the agenda of the progressive ideology being put forth by the Governor and the Super Majority in the Legislature. In my travels throughout Portland, Salem and Eugene, there is gridlock due to high volumes of people sitting alone in cars. Perhaps attention toward more infrastructure and efficient and safe public transportation should be the focus of climate change rather than selectively target certain industries as the culprit. No on SB 1530. Please think about hardworking Oregonians in rural areas that will be significantly impacted by this bill.

Respectfully,
Russel Sweet
Salem, Oregon 97304
