Subject: I disapprove of SB 1530
Date: Monday, February 10, 2020 11:43:01 AM

While I support legislation to control greenhouse gases, this legislation requires too much power relegated to the state to support this. I do NOT think a state of emergency is necessary or will help us adopt better energy plans. I think it will drive people to disbelieve human impact on climate change and is too uninformed.

For example, electric cars without renewable energy sources are worse for the environment. We need wind, solar, and most important good nuclear energy to solve these problems. I also think taxing greenhouse gas emissions is sensible and I support environmental measures such as reducing non-renewable bag usage, but giving excessive power to the state declaring a state of emergency and allowing the aligning of state laws is undemocratic and unnecessary.

I am therefore not in support of this lobby effort and I am withdrawing my support of Citizen's Climate Lobby.

;

Please do not support this bill in this form. Many of these measure are NOT necessary.
