

Dear Chair Dembrow,

Chlorpyrifos is a very important tool for us to use in controlling the cabbage maggot in Turnips and Rutabagas. We use it very sparingly but when there isn't anything else, we need to use it. There aren't any other good chemicals that we can use so please don't take one of our last tools away. I wish that there was something else that we could use, I would rather use something safer

PLEASE vote no on HB4109

Sincerely,

Manfred Schosnig
