I am writing today in opposition of HB4167 and to express my concerns over this bill and also to get some questions answered.

First I believe this is an abuse of the short session. There is not enough time for major bills like this and should be deferred and not rushed through.

Second, because this bill will cost and have big impacts for every Oregonian, this is an issue that needs to be sent to the voters. Remove the emergency clause and also refer it to the voters on the ballot. If it is such a good bill what is the fear to put it to the people?

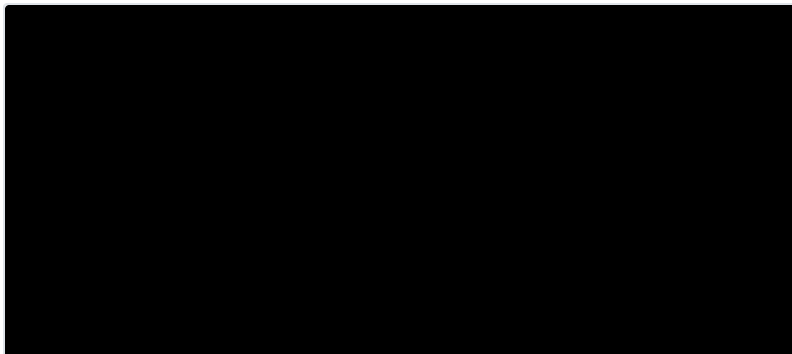

Why is there no fiscal or revenue impact statement on this bill? This needs to happen before any of the legislatures can honestly vote on this bill. Otherwise they are voting without being fully informed and that is not right.

I am also extremely concerned with the exemptions from disclosure of public records. Why is that? That also brings distrust and lack of transparency is not good for any government.

This bill will negatively affect our state. It will raise the cost of fuel and utilities for all people and businesses. This most likely will create higher prices for goods and services as well because industries and businesses will pass higher prices along to the consumers.

Because of these concerns and that there seems to be more cons to going forward with this bill that really will not have significant reductions in emissions I urge you to vote no on HB4167 as well as SB1530.

Please look at this article I recently read about how the cap and trade program has impacted California. [California's Aggressive Renewable Mandates Are Not Having the Desired Affect](#)

California has some of the most aggressive mandates for renewable energy production in the country. The state ha...

Thank you for taking the time read and I hope you will be able to answer my questions as well. Please vote no on this bill.
