

Wildlife mortality due to wildlife-vehicle collisions is a significant issue for many of Oregon's wildlife species

Scientific name: Martes caurina

Status: Threatened (Coastal Distinct Population Segment)

“...even a small number of human-caused mortalities will strongly increase the likelihood of extirpation over the next 30 years.” – Linnell et al. 2018, “Density and population viability of coastal marten”

Overpass- Banff NP

Lava Butte underpass

Concrete culvert

Fisher passing through steel culvert

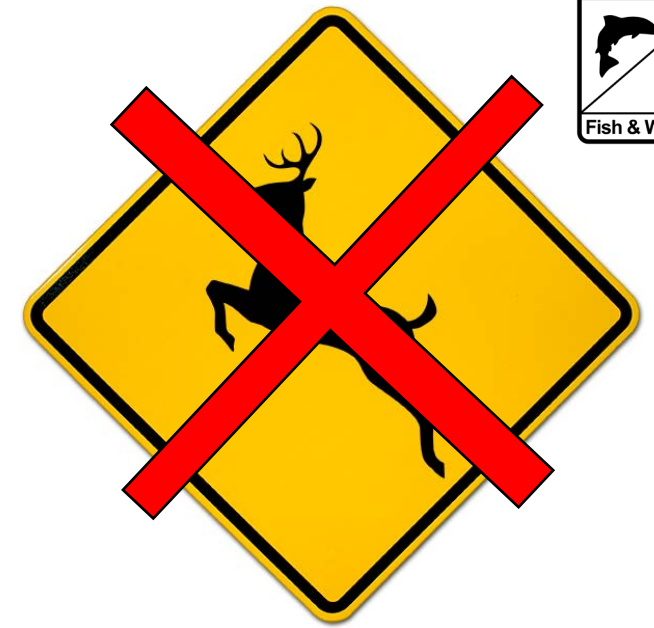

At-grade amphibian crossing

Thermal detection—BC

Wildlife detection system signs flash on Highway 3, alerting drivers of elk.

FLIR detection system

Oregon Connectivity Assessment and Mapping Project
