

If the earth were standing next to you about 3 feet high or the size of a hula hoop or so – the thickness of the blue sky would be about an eighth of an inch, if that. Guess what we are doing to the plants and their requirements to survive along with the bees and butterflies, all of which we have to have. The heat is killing us.

Our IGNORANCE is killing us. We are only as good as the information we take in and how we perceive it.

We need to get the TRUTH along with the Proof out there to those wonderful people who love this planet and LIFE ITSELF. Most of us are just going along with our daily lives busy and working hard thinking up excuses in our minds why things are hot or that we have major problems for some other reason, or that it's not going to be their problem. STOP PUTTING CARBON IN THE BLUE SKY ---THEIR ISN'T MUCH BLUE SKY If you look at a picture of earth floating in space you will see the clouds and the oceans and the continents. THEN ASK YOURSELF ; WHERE IS THE BLUE SKY ? CAN YOU SEE IT? It is that light blue sheen barely visible. NOW TELL YOURSELF THE TRUTH . (if you need to spend more time thinking about it, please do.)
