Measure: SB1998

THIS IS A TEST

HB 2101 would create new fees and increase the amount of certain fees collected by the Water Resources Department. Increased transaction fees will support the Department's current level of service for water rights processing and will allow the continuation of two positions working to address the backlog of water right transfer applications. The fee levels were reviewed and approved by the Water Resources Commission. These bum fees were last modified in 2003, at which time the Legislature directed the Department to make more regular adjustments to its fee structures.
