

Oregon State Correctional Institution COVID 19 Management Timeline:

Oct 1 - given swab test for cv19, third person in line, neither of two nurses regloving between subjects

Oct 2 - facility unit 11 locked down

Oct 3 - test came back negative, cellmate positive, cellmate transferred to CCCF and narrator remained in quarantine at OSCI. No bleach provided to sanitize contaminated cell. Cellmate contaminated possessions left in cell.

Oct 12 - narrator and second key informant retested.

Oct 13 - cellmate and other CV+ men returned to OSCI. They have not been retested since positive test that had them removed. This invalidates the results still waiting on for Oct 12 test. This now creates a third window period.

NONE of the activities here are informed by science or any understanding of standard precautions.

Narrator still awaiting second results pending. DOC has announced that these workers will return to work alongside outside contractors irrespective of the lack of knowledge of true status. If this person refuses to return to work he will be penalized by losing his job, being shipped out and being marked down for a program refusal that can stop him from getting "good time" early release if M11 ever becomes eligible for such. All contractors working for OCE will be punished if they follow the science.

Officers continue to say "we are doing our best", but DOC is simply not doing so.
