Each calendar year, the board shall identify nine drugs and at least one insulin product from the lists provided under this subsection that the board determines may create affordability challenges for health care systems or high out-of-pocket costs for patients in this state based on criteria adopted by the board by rule, including but not limited to:

- (a) Whether the prescription drug has led to health inequities in communities of color;
- (b) The number of residents in this state prescribed the prescription drug;
- (c) The price for the prescription drug sold in this state;

(3) The board shall accept testimony from patients and caregivers affected by a condition or disease that is treated by a prescription drug under review by the board and from individuals with scientific or medical training with respect to the disease or condition.

(4)(a) If the board considers the cost-effectiveness of a prescription drug in criteria adopted by the board under subsection (1) of this section, the board may not use quality-adjusted life-years, or similar formulas that take into account a patient's age or severity of illness or disability, to identify subpopulations for which a prescription drug would be less cost-effective. For any prescription drug that extends life, the board's analysis of cost-effectiveness must weigh the value of the quality of life equally for all patients, regardless of the patients' age or severity of illness or disability.

(b) As used in this subsection:

(A) "Health utility" means a measure of the degree to which having a particular form of disease or disability or having particular functional limitations negatively impacts the
