

Due to modern practices, land dedicated to cemeteries becomes largely useless for any other purpose, and the process of preparing remains for interment is exceptionally environmentally harmful. Who wants their last "act" in this world to be the contribution of a toxic legacy for the future? Natural Organic Reduction allows people to choose that their final legacy be beneficial to the earth, rather than destructive - leaving behind only improved soil, instead of adding to the already-heavy load of pollutants in the air and water. It is only right to make this safe and effective process available to the people of Oregon.
