

I oppose allowing exemptions for modular reactors and urge you to vote against SB 360. Nuclear energy might be free of greenhouse gases, but it is not free of danger. From the mining of uranium fuel to the disposal of spent fuel rods, nuclear energy is a threat to human health. This type of pollution is insidious and lasts for thousands of years. Please vote in favor of clean energy, such as solar and wind, rather than this source that adds significant threats to our environment.
