

Dear Committee Members,

I am Tom Bruno, disabled Vet with an advanced degree in logistics / economic geography. I am amazed and appalled at the proposed housing legislation. I am writing to voice my negative support to SB458.

It is apparent the housing industry is paying for the legislation. If adopted, electric cars will not have enough parking spaces to charge the title wave of electric car sales within the next three years.

What Portland is doing is exactly 180 degrees opposite what Europe. Countries are doing. Best thing you can do is get on a plane and see how Denmark, Germany, and Sweden are handling high density. People work in the city, like the VW factory is in downtown (middle of the city) where parts arrive on the same transportation infrastructure as the people. <https://youtu.be/aQkE0PSfD-g> People live outside the city and work in the city. It is more efficient, cheaper, and you are not destroying neighborhoods

I will be glad to review point by point on the illogical language of the legislation.
