

I am supporting all of the Clean Energy legislation (except the inclusion of any nuclear energy in any form) before the Oregon legislature this session. In order to meet our climate/CO2/clean energy and other environmental goals, we must act decisively and act now. I am a mother, grandmother, great grandmother and retired community college professor of biology, ecology and health professions. I am a long-time environmental and justice activist. Clean energy and abating the already existing climate crisis are extremely important to me on a personal, family, community, and global level. Please continue to work diligently towards these critical goals.
