

This will put a burden on our timber companies that have already been financially burdened because of the fires of last year. Why run them into a corner where they will be further over taxed and less profitable. Job loss because of this tax will affect cities that are supported by logging. The supposed creating of a tax that will attack our timber companies for the sake of taxes. Please reconsider this tax on our over burdened state that does not need to go after jobs and companies that are our bread and butter.

Thank You  
Ed Dew
