

Please consider allocating funds to the Falls City Wastewater/Sewer project. Our community is desperate need of an updated system. Currently, the City's leach field is underneath the Falls City High School football field. It is also nearly maxed out for capacity which means our community has no room to grow or to bring more current residents online with the existing system. Our community is largely elderly, disabled, and low-income. Funding could bring dollars to the project and reduce the amount of money sewer customers will have to finance. Specifically, it could significantly reduce sewer rates over the next decades for our most vulnerable citizens.
