

I oppose this bill because electric users should not have to pay for remote facilities for people to charge or fuel their cars. The state is losing between \$150 and \$180 a year from gas taxes from these electric car users. Yet you gave them a tax credit for buying the electric car and you didn't increase the license fee enough to cover the wear and tear on streets that cities and counties have to pay for. I say make them pay for recharging stations! You didn't have the public pay for gas stations! Vote this down!
