

Dear chair Nathanson & Revenue Committee Members:

I am testifying in support of 2357 because as a taxpayer I want independent, science-backed curriculum in our schools. OFRI curriculum underplays the devastating effects of clear cutting and presents big timber propaganda as forest facts. While OPRI presents itself as a government agency, the board is dominated by the timber industry which illegally lobbies against climate-smart forestry with disinformation campaigns.

We need independent scientific information being provided to all Oregonians.

Respectfully,  
Kathleen Boylan
