

Our family purchased a home in the area with the specific intent of spending time on the water including using SUPs and boating. We love spending time outside and enjoying what this wonderful state has to offer.

As a scientist and researcher, I urge you to ground your decisions in solid and unbiased data. It is also imperative to make decisions that favor equity among the population, rather than giving preference to select waterfront homeowners and paddlers looking to eliminate motorized boating for their own personal gain.

Thank you!
