

I am currently in the process of replacing a hot water heater and realize the high cost would be crippling for a low-income family. I support HB 2842 because health starts at home! People living in energy inefficient homes experience sick days and hospital visits caused by mold, cold weather, and an inability to take refuge from wildfire smoke and bad outdoor air quality.

Right now, the State of Oregon lacks a program to support critical home improvements for low-income families. This must end with HB 2842. Thank you.
