

: For many years plastic producers have misled us into thinking just because there is a triangle on packages/packaging that it can be recycled. I have done a great deal of research into the matter and the bottom line is that we have all been lured into a complacency about the plastic problem. Look at your local recycling company's restricted items list for recycling. There are so many things they can't recycle. As a consumer I am horrified at the amount of plastic that I have no choice but to throw away. Due to the pandemic, the problem has become worse because, like so many, I order groceries from home and I've had to increase the use of plastic that I wouldn't use or choose if I could comfortably go shopping myself. And bulk items, again, are not viable now during a pandemic. We need the truth. People need to be aware of just how much or how little is actually recyclable. Thank you for your support of this vital bill!
