

I strongly support SJM 5 enacting bipartisan climate change legislation. I have two children who are teenagers and they have seen the hottest years on record in their lifetime, and this warming continues to get worse. It is past time to take action. This is a priority issue we face and impacts all other challenges- immigration, economy, food security, health and more. We are dooming the next generation to inherit a climate that will not be livable by delaying immediate, strong action now.
