

To Whom It May Concern:

I oppose this bill because of the added burden of taxation on a situation, that is already in dire need of help, is totally without merit. Our forests have burned because of mismanagement of the forests income in the past. I do not have any confidence in the future management of forest income.

How about letting the lumber companies manage the forests. They have a vested interest in the well being of these forests and will do everything in their power to maintain and improve the forests, not let them become so overgrown that major wild fires like those last year are common...
