

This year, there has never been a more important time to enact climate policy. I have said this exact line every year on either the state or national level for the past 7 years of my life. I am now 17 years old. I have grown up in this fight for our climate. Watching each year as the same excuses get used while climate change continues to take its toll on the world. If we want to avoid the 6th mass extinction that looms over our heads we cannot wait any longer to enact climate action. It's clear that if a bipartisan climate policy were to be implemented on the national level, it would change how climate delayers and we all view climate policy forever. We have a historic chance to rewrite the climate story. To watch the news and not see the states we live in on fire or see the coasts continue to get destroyed by hurricanes and tropical storms.

This year, there has never been a more important time to enact climate policy. I have said this exact line every year on either the state or national level for the past 7 years of my life.

Please help make this the last.  
Thank you.
