

Thank you for considering this bill which would allow us to process human remains in a way that has less environmental impact! The process is sped up in comparison to other natural burial options. I love that it wouldn't involve chemicals that would impact the environment and that my loved ones could keep the soil to plant a tree in the yard or donate it to enrich the soil of a habitat that is being conserved or restored. It's beautiful to think we could impact the ecosystem positively after we die.
