

When at a traffic stop sitting on my motorcycle inside the lane behind a car, a driver on another car almost hit me because she didn't see me as she was focused on the car in front of me. It was dusk time and raining and my motorcycle lights were not as bright as the lights on the car in front of me. This is a dangerous situation that can be avoided if I am not in the lane behind a car. If stopped by a traffic light and I am between cars, I will be protected.

The other advantage is that in this way motorcycles use less space and ease the situation of traffic congestion. I sincerely hope that you pass this legislation!
